

Steroid APIs:

World Leader in Steroid Production

Pfizer CentreSource has a history of innovative steroid technology stretching back (through The Upjohn Company and Searle) to the 1950s. Continued focus on new process and product development – especially in the areas of respiratory therapy, women’s health, dermatology and oncology – underscores our long-term commitment to the field of steroid APIs and intermediates.

Look to Pfizer CentreSource for a full range of capabilities, technologies, and services:

- World-class resources for analytical, regulatory, and technical support
- Outstanding chemical and bioprocess expertise and infrastructure
- In-process and finished API analytical methods development
- Comprehensive regulatory/registration
- Long-term partnerships backed by strategic development and supply commitments

Steroid Intermediates:

Pfizer CentreSource is your first choice for both advanced steroid intermediates and earlier “pivotal” steroid intermediates:

- Provides greater flexibility in your manufacturing strategy
- Standard offerings and the possibility of custom intermediates for specific applications
- Innovation, versatility, and quality for the most demanding API applications
- Several intermediates offered with supporting US Drug Master Files for FDA markets

When you need a reliable, experienced source for steroid APIs and intermediates, contact Pfizer CentreSource. You’ll be glad you did.
